Objective

The opportunity to test and utilize my dedication, passion and creativity while gaining experience in web and mobile design (iOS), as well as general web-based graphic design. Please visit my portfolio at <http://www.massivecake.net>.

Projects

Honor Before Death iOS — 2012

This nostalgic tactical shooter is a port of the original Mac game Bolo. Uses Cocos2d and Box2d on iOS devices.

Busting Ball iOS — 2012

Classic Breakout clone with updated graphics to look a little more candy like. Uses Cocos2d and Box2d on iOS devices. Graphics were created with Photoshop and Illustrator.

MassiveCake.net Web — 2012

A personal portfolio website that I've maintained for years, currently built with Wordpress and a custom hand-coded HTML/PHP and CSS template. The graphics were designed in Photoshop and Illustrator.

Axxess Global Property Investors Web — 2011

One of many sites I maintain for this client, mostly about financial advice overseas. The website is built with Wordpress and a custom hand-coded HTML/PHP and CSS template. It also includes just enough JavaScript and jQuery to be worth mention.

Craftology Store Web — 2011

This website is for a local crafters mecca in Fair Oaks, CA. The website is built with Wordpress and features an online shopping cart in addition to event bookings. It also includes a heavily modified HTML/PHP and CSS template.

Offshore Evaluation Service Web — 2011

Much like Axxess Global Property Investors, an overseas financial evaluation service. The site has hand-coded HTML & CSS with a bit of JavaScript and jQuery for aesthetic appeal.

Experience

Massive Cake Sacramento, CA 2009-Present

After EyeCandy Marketing closed (see below), I forged ahead on my own. I created Massive Cake LLC to continue developing websites, occasionally hiring freelance independent contractors for some design work.

EyeCandy Marketing Sacramento, CA 2006-08

As a senior web developer and graphic designer I created websites (front & back end), scripts, web apps, and interactive elements, via code. I designed websites (UI/UX), print pieces, t-shirts, logos etc., while following applicable brand guidelines and set-up, configured, and modified Content Management Systems, using Drupal and Wordpress. Other tasks included design and implementation of database schemes, creation and management of email campaigns, and consultation and training of clients. I was also responsible for preparing and submitting work to printers and troubleshooting internal hardware, software, and network problems.
